

COURSE OUTLINE – (FTT-CII-005)

FINEOS CUSTOMISATION II – RULES MANAGER

Overview

FINEOS Rules Manager provides for the configuration of events and the associated rules that may be fired when these events are raised within the FINEOS application. This course examines the built-in events within the FINEOS product and also describes how new events may be configured within the application or may be written into the code using the FINEOS Events API. The course focuses on Java Rules, which are pieces of Java code that can be executed when an associated event is raised, and also details how Java Rules may be invoked from FINEOS Expression Rules.

Objectives

To provide attendees with practical knowledge of writing Java Rule code, using the Events API and configuring rules and events using FINEOS Rules Manager.

Who should attend?

Java developers involved in the technical development of the FINEOS Solution

Pre-requisites

Skills:

All attendees should be Java Developers with knowledge of J2EE

Courses:

FTB-F-004 – FINEOS GUI Usage – Front Office

FTT-CI-002 – FINEOS Customisation I – Front Office Data Model

Formats & Duration

Delivery	Tutor-Led Practical	Duration	1 Day
Description			
The desired effect for participants on completion of this course is an acquisition of skills i.e. to ' KNOW ' how to use a particular area of the FINEOS product. Participants are led through practical exercises relevant to the particular skills area directed and assisted by the tutor.
