#### **Who should attend?**

---

Candidates who are familiar with FINEOS Claims and require knowledge of processing payments in the FINEOS system.

#### **Pre-requisites**

---

**FTB-C-003 FINEOS Claims Overview**

#### **Summary of course content**

---

Module	Description
<b>Ad Hoc Dues</b>	FINEOS has strategized with its global customer base to design a payment solution to support fast-track, high-volume payments. The Ad Hoc Dues module demonstrates how to process an unscheduled payment in the FINEOS system. This course details how to set up an ad hoc due, define a payee, add adjustments, and process the payment.
<b>Recurring Payments</b>	FINEOS's sophisticated solution to managing scheduled payments is known as recurring payments. A recurring payment is an ongoing payment that is scheduled to be paid over a period of time. FINEOS has researched and developed a Recurring Payments Wizard, which provides a step-by-step guide to setting up a recurring payment. The innovative functionality of recurring payments supports backdated corrections and allows for the automatic or manual recalculation of payment amounts, while providing the

	<p>user with an outstanding balance if the amount is overpaid or underpaid.</p> <p>Trainees of the recurring payments module will garner experience in using the Recurring Payments Wizard to set up their benefit payment. This includes learning how to add payees, set payment dates, frequencies, and apply adjustments before processing payments. Furthermore, this course explores how to reconcile overpayments and underpayments in the FINEOS system.</p>
