

FINEOS Claims for The London Market

Helping you achieve claims excellence
and deliver a world-class service

- Effective and efficient claims management
- Improved outcomes and better Market relationships
- Reduced cost of managing claims

FINEOS Claims enables you to:

Communicate more effectively

Customers and Brokers want to be better informed at all stages of the process. Transparency and access are keys to successful market relationships. FINEOS Claims has fully integrated correspondence with all communication channels tied in automatically to the claim file. As every interaction is recorded and auditable, you can easily know all that has happened to a claim. Everyone who needs it gets access, subject to security. What they see is tailored to their role so they only see what they need. With access to richer data from the claim file, (correspondence, financial data, supporting documents), and all decision points recorded, you can communicate easily and effectively with your customers, keeping them informed throughout the process.

- **Integrated correspondence**
- **Transparency**
- **Improved decision making**

Improve your services

FINEOS Claims simplifies the complex and drives processes according to your own business rules. The richer data integrated into the system with Write Back provides you with greater insight and improved operational intelligence, enabling you to fulfil tasks smoothly, be alerted to problems as they arise, and deal with them before they escalate. With FINEOS Viewpoints for experts and third parties the claims process is securely opened up to all who need access, when they need it.

- **Increase value to your customers**
- **Provide access for all who need it**
- **Accuracy, consistency, availability**

Focus on quality of outcomes

A claims system that enables greater efficiency allows your team more time to deal with complex claims. Automated segmentation and triage puts the right claim with the right person at the right time. Experienced professionals with a balanced workload and tasks correctly matched to ability, use a centralised repository and a single view of the file to manage their claims effectively and efficiently.

- **Faster settlement**
- **Improved resolution**
- **Richer data – better Insight**

We are delighted that FINEOS Claims has been enabled for Write Back and look forward to the benefits of using the new system. Write Back represents a huge stride forward in claims handling and management and supports plans for London Market modernisation. Managing Agents who use FINEOS will be able to differentiate themselves from their competitors by adding genuine value to their claims service. By using a single operating model, carriers can reduce duplication effort and overall claims cycle times.

Michael Kelly, CEO, FINEOS

ECF Write Back services fully supported by FINEOS Claims

Delivering fully integrated time critical claims management

Always on, always available, up to date view of claims

Never miss out on key updates
